

Making Central Management Easy

for EZCast Pro II & QuattroPod Devices

Confire Cloud

The new platform for cloud-based central management of EZCast Pro II and QuattroPod devices. With direct access to the firmware, Confire Cloud can easily manage the devices.

One Central Platform

Whether you are using devices from the EZCast Pro II series or the QuattroPod series, all devices can be managed seamlessly with a single software, Confire Cloud.

Dashboard

Keep track of all EZCast Pro II/QuattroPod devices in your network. View important information such as device status, IP address, and current firmware version in an overview.

Device Groups

Grouping devices into device groups simplifies daily tasks with Confire Cloud. For instance, you can assign device groups to specific floors or buildings.

Tenants

In Confire Cloud, tenants can be represented through device groups. This way, organizational units such as branches of a company or schools of a school authority can be organized.

Templates

Saving existing or custom-created device configurations as templates makes management incredibly easy. Of course, deploying a configuration to multiple devices is also supported.

User Management

You can define user groups and different access rights for the features of Confire Cloud.

Hosting

GDPR-Compliant and Secure

Confire Cloud is offered as a Software-as-a-Service (SaaS) solution. It is hosted by us in full compliance with GDPR requirements. All data is stored on German servers (Hetzner data center, certified to DIN ISO/IEC 27001 standards). Data transmission between you and our servers is encrypted by default using SSL/TLS.

Location	Device Name	Model	IP Address	Location
Bedford (3)	DIRECT-Room-001 Classroom	Cast Go 1.16163.140	192.168.8.247	Bedford School
